MAZDA GREEN PLAN 2020
MID-TERM ENVIRONMENTAL PLAN

Mazda Green Plan 2020 Mid-Term Environmental Plan

Based on the “Philosophy and Policies” for environmental initiatives, being premised on “Mazda’s Vision of a Future Society and Its Relationship with Vehicles”, the plan is developed, centering on the following three main perspectives.

I. Themes to Be Resolved in the Future
Mazda considers the following as issues that both customers and society expect automakers to make positive contributions toward:

1. Energy- and Global-Warming-Related Issues
   Undertaking measures to reduce CO₂ emissions over the entire life cycle of a vehicle.
2. Promoting Resource Recycling
   Reducing waste from vehicles, the vehicle manufacturing and shipping processes, and disposal of end-of-life vehicles, as well as actively promoting the comprehensive recycling of resources.
3. Cleaner Emissions
   Reducing various emissions/waste (aside from CO₂) from vehicles and manufacturing processes, especially emissions with highly adverse environmental impacts.
4. Environmental Management
   Develop environmental management throughout the entire Group and supply chain.

II. Mazda’s Initiatives (two categories)

a. Vehicles and vehicle technology
   Contributing to a reduced environmental impact through products and technology
   Contributing to a reduced environmental impact through all activities (excluding those related to products and technology)

b. Manufacturing, Logistics, Office Operations, Social Contributions, etc.
   Contributing to a reduced environmental impact through all activities (excluding those related to products and technology)

III. Consideration of the Entire Vehicle Life Cycle
Mazda is making efforts to reduce environmental impact throughout the entire product life cycle. About 75% of CO₂ emissions occur over the period from customer use to disposal - an overwhelming percentage of overall emissions (see p. 58).

- Manufacturing and logistics (materials manufacturing, and vehicle manufacturing):
  accounts for around 25%
- Product use and disposal (use by customer, maintenance, disposal and recycling):
  accounts for around 75%

Mazda’s Vision of a Future Society and its Relationship with Vehicles

Around 2050: A sustainable society that aims for low-carbon, recycling-oriented, and coexisting in harmony with nature

The 2015 United Nations Climate Change Conference (COP 21) adopted the Paris Agreement, which aims to hold the future increase in the global average temperature to below 2°C and to pursue efforts to limit the temperature increase to 1.5°C compared to the status before industrial revolution. The world is seeing an acceleration of decarbonization in energy toward the realization of a low-carbon society.

This movement enables the combination of a sustainable society that values recycling in order to effectively use limited resources and one that also coexists in harmony with nature, as well as allowing for the stable continuation and progress of humankind. Specifically, they are: a society with greater use of renewable energy sources such as solar power, wind power, and biofuels, and a shifting away from carbon energy; a society with improved resource behavior and a diffusion of activities based on the three Rs (reduce, reuse, recycle), enabling efficient and continued use of resources over their entire life cycle; and a society that allows the use of water sources, ecosystems and forests into the future as natural capital.

Regarding vehicles, demand the world over has diversified to include preferences based on regional needs, vehicle characteristics, fuel performance and characteristics, and other factors. This demand profile will only grow more complex in the future.

A multi-solution approach is needed to respond to these diverse demands. Mazda’s expectation is that greatly improved internal combustion engines, alternative fuels such as natural gas and biofuels, and new types of vehicles that do not emit CO₂ by using energy sources such as electricity and hydrogen, and other such innovations, will provide those solutions. Going forward, Mazda believes it is necessary to push the limits of what is possible as the Company carefully plots the direction for its brand and technologies.

Around 2020: A low-carbon society in which CO₂-reducing technologies have become widespread

Around 2020, Mazda sees society on the way toward achieving a sustainable society while still maintaining the use of fossil fuels (oil based fuels, etc.) as its basic energy source. From energy security viewpoint, we expect the evolution of efficient fuel-use-technology for diverse fuels meeting with unique characteristics of each market/country, and the further introduction of low-carbon technology for several kinds of fuel/energy (electricity, gas, etc.) materials/products covering all life-cycle processes (from production to consumption by users). Many products and services will be evaluated based on their environmental performance throughout their life cycle.

Regarding vehicles, highly efficient internal combustion engines—such as gasoline and diesel engines, using liquid fuels (oil, biofuels, etc.), which account for most of the energy for mobility due to their high energy-preservation characteristics—will mainly be used as a base, and additional innovations that contribute to increased fuel economy, such as electric device technologies (idling-stop systems, regenerative braking, hybrid systems, plug-in hybrid systems), efficient transmissions, and reduced vehicle weight will also be implemented.

Moreover, technological innovations to support combustion technologies corresponding to diverse fuels and the use of natural gas or biofuels that emit less CO₂ are also expected. At the same time, electric vehicles will be introduced as an optimal form of mobility in regions where low-carbon energy can be supplied, such as power generation using renewable energy. On top of these trends, large-scale approaches such as reducing traffic congestion in urban areas will contribute toward the greater goal of realizing a low-carbon society.
Life Cycle Assessment (LCA)

Mazda adopts LCA, a method for calculating and evaluating the environmental influence of products across its entire life cycle of vehicles through the purchasing of materials, manufacturing, use of products, recycling and final disposal, in order to actively reduce environmental impacts. The Company has confirmed the benefits of its clean-energy vehicles and newly introduced vehicles with internal combustion engines. LCA is conducted for newly introduced vehicles in compliance with international standards (ISO 14040, ISO 14044), serving as objective and highly reliable proof that those new models have reduced environmental impact throughout their entire life cycles.

Mazda intends to steadily expand the implementation of LCA to new vehicles and confirm their environmental benefits.

Approaches and Targets in Each Area for 2020

To execute the Mazda Green Plan 2020, three committees set the following approaches and targets to promote each effort.

**Products and technologies: Product Environment Committee**

Mazda provides all customers who purchase Mazda vehicles with driving pleasure as well as outstanding environmental and safety performance.

**Manufacturing, logistics, and office operations: Business Site Environment Committee**

Mazda contributes toward realizing a low-carbon society through achieving even greater gains in operating efficiency by introducing low-CO₂-emission production technologies and unwavering actions for constant improvement in the entire Mazda Group in Japan.

**Social contributions (environmental area): Social Contribution Committee**

Based on the three pillars of Mazda’s social contribution activities regarding the environment and safety performance, human resources development and community contributions, and a group-wide, global perspective, Mazda commits to disclosure and raising public awareness of environmental issues through its main business as an automobile maker. The Company also focuses on collaboration with regional communities, including volunteer activities.

<td></td>
<td>② Improve fuel economy using SKYACTIV TECHNOLOGY.</td>
<td>Raise the average fuel economy of the Mazda vehicles sold worldwide by 30% by 2015 and 50% by 2020 compared with 2008 levels.</td>
<td>• Achieve the fuel economy target for 2020. • Promote SKYACTIV TECHNOLOGY steadily. • Promote development and implementation of technologies based on the Building-Block Strategy.</td>
<td>Introduced SKYACTIV TECHNOLOGY into the new CX-5. • 4x of the end of FY March 2017, the Company has raised the average fuel economy of Mazda vehicles sold worldwide by 28% compared with 2008 levels. (Plan: 31%). (This is the result of the Company’s achievement of both raising global fuel economy and satisfying customer needs. On the estimated model mix basis at the time of the establishment of the plan, the Company almost accomplished the plan of an increase of 30% compared with 2008 levels. However, the model mix has changed due to higher demand for crossover models than estimated.)</td>

* For CO2 emissions calculations, the CO2 coefficient based on the standard (Keidanren’s Commitment to a Low Carbon Society) of the Japan Business Federation (Nippon Keidanren) are used. (For the calculations of FY March 2017 and after, the coefficient of FY March 2016 is used.)

* The target for FY March 2018 has been set with consideration given to the increase in production volume and the reduction of the basic emissions unit.

### 2. Promoting Resource Recycling

</table>

* The targets for FY March 2021 and 2017 regarding the use of tap water contained the volume of the tap water to be used by facilities that are not covered in the plan. Accordingly, the targets have been revised based on the appropriate coverage of the plan.
3. Cleaner Emissions

a. Vehicles and vehicle technology

- **Ensure cleaner vehicle exhaust gas emissions.**
  - Introduce and promote low emission vehicles to improve air quality in each country and region.
  - Promote the introduction of low emission vehicles that meet the needs of each country and region.
  - Japan: 97% (vehicle number ratio) of passenger vehicles met the SU-LEV (SU: Super Ultra Low Emission Vehicle) standard.
  - United States: Introduced low-emission vehicles that meet Tier3/LEV2,3 regulations in all product lines.
  - Europe: All product lines met the Euro 6 standards.
  - China: Developed vehicles that meet Euro 5 standards or equivalent levels.
  - Other: Introduced low-emission vehicles that meet the needs of each country and region.

b. Manufacturing, logistics, office operations, social contributions, etc.

- **Reduce waste volumes of PRTR substances.**
  - Reduce waste volumes of PRTR substances across the entire Mazda Group in Japan.
  - Reduce waste volumes of PRTR substances across the entire Mazda Group in Japan by 2.5% compared with FY 2016 levels.
  - Reduced waste volumes of PRTR substances across the entire Mazda Group in Japan.

- **Reduce volumes of VOC waste emissions.**
  - Reduce volumes of VOC waste emissions to an average 22.0 g/m² or less across all Mazda lines.
  - Reduced volumes of VOC waste emissions to an average 22.0 g/m² across all Mazda lines.
  - Reduced volumes of VOC waste emissions to an average 22.0 g/m² or less across all Mazda lines.

4. Environmental Management

a. Vehicles and vehicle technology

- **Promote life cycle assessment (LCA) in all Mazda lines.**
  - Promote the establishment and introduction of environmental management systems (EMS).
  - Promote the establishment and introduction of environmental management systems (EMS).
  - Promote the establishment and introduction of environmental management systems (EMS).
  - Supported 100% establishment of EMS among major suppliers.
  - Supported and enhanced EMS at secondary suppliers.
  - Promoted introduction of EcoAction 21 at all Mazda Group dealerships in Japan.

- **Reduce the environmental risk of the Mazda Group in Japan.**
  - Promote the implementation of LCA in new vehicles.
  - Steadily implement LCA in new vehicles.
  - Implemented LCA in the new CX-5.

b. Manufacturing, logistics, office operations, social contributions, etc.

- **Promote activities for awareness of environmental issues.**
  - Continuously raise awareness inside and outside of the Group regarding environmental issues that society faces and measures throughout the entire life cycle of vehicles to reduce environmental impact.

- **Promote environmental protection activities in regional communities by taking part in environmental volunteer activities (including regional cleanups and efforts to preserve biodiversity) and dispatching instructors to regional events and schools to offer environmental education.**

- **Promote environmental protection activities in partnership with regional communities.**
  - Promote activities to deepen understanding of biodiversity and forest preservation, dispatch instructors for environmental education to regional communities and continuously participate in regional cleanups based on their needs.
  - Promoted environmental activities based on the needs of regional communities (around 30 activities in Japan and abroad).
  - Major activities: Forest preservation activities, support for protection of endemic species, regional cleanups, carbon offset, etc.

- **Promote environmental protection activities worldwide by hosting and actively participating in environmental events.**
  - Continuously disseminate information at a wide variety of environmental events (including motor shows held in Japan and abroad).

- **Promote environmental protection activities worldwide by hosting and actively participating in environmental events.**
  - Disseminated information by holding/participating in environmental exhibitions and events, such as Eco-Pro 2016.

- **Continuously disclose information on the Mazda Group’s environmental protection activities.**
