Mazda believes that both quality improvement and the exploration of partnerships for "co-creation with others" provide an essential foundation for its endeavors to solve issues faced by the earth, people, and society.
QUALITY IMPROVEMENT

Basic Approach
Toward the realization of its Corporate Vision, Mazda believes that it is important to enhance the quality of “all things offered outside the Company,” including products and services, to satisfy customers. The Company defines the Five Types of Mazda Quality: “quality of work,” “quality of management,” “quality of work environment,” “quality of behavior,” and “quality of all things offered outside the Company,” which is underpinned by the preceding four. In line with its quality policy, Mazda further advances the efforts it has made and promotes united collaboration among all areas, continuing to enhance Mazda’s unique value.

Mazda Quality Policy

To enrich the lives of our customers by providing products and services that reflect steady and uncompromising work.

Vision for Quality Assurance

Vehicle production based on the “100–1=0” belief

1. Establishing consistent quality from planning to production:
   “100–1=0” expresses Mazda’s strong desire to provide good quality to all customers under the belief that if even only one out of 100 vehicles is found to be defective, the car has no value for the customer. Mazda pursues a kind of vehicle production that respects each vehicle as a certain customer’s “one-and-only,” and aims to achieve “zero defects.” In keeping with the basic principles of manufacturing and based on a full understanding of its mechanisms, all related departments work in close collaboration to establish consistent quality in all processes, from planning to production.

2. Early detection and early solution of market problems:
   If an unpredictable problem arises in the market, it may result in loss of trust from customers (“100–1=0”). To avoid this, Mazda promotes quality assurance activities for the early detection and early solution of any trouble pointed out by customers.

3. Building special bonds with customers:
   Mazda aims to build special bonds of everlasting trust with its customers by keeping contact with customers in good faith and with a sense of commitment to them (“100–1=0”⇒“100+1”). Toward this goal, the Company promotes human resource development by encouraging every employee to think about what they should do to make customers happy and to act accordingly.
Mazda Quality Management System (M-QMS)*1
To make faithful and unceasing efforts and constantly ensure quality in products, sales and after-sales services that can always satisfy the expectations and trust of customers, Mazda has established the Mazda Quality Management System (M-QMS) based on ISO 9001*2, and has applied it to the series of processes from product development to production, sales and after-sales services. At overseas production sites, Mazda also promotes the establishment of systems that encourage local employees of new sites to make self-reliant efforts to improve quality, and encourages them to acquire ISO 9001, thereby promoting the quality improvement of Mazda vehicles, which are produced and sold worldwide.

Establishing Stable Quality
Not only to improve the performance of products but also to enhance the quality of new technologies including the initiatives to address environment issues, Mazda is committed to “process assurance.” Process assurance is the approach of ensuring a consistent quality level at all stages from engineering (planning, product development) to manufacturing (purchasing, vehicle production, logistics, after-sales services). Based on the correct understanding of customer needs and expectations, the important elements necessary to ensure each function and performance are identified. The Company has established a system to maintain and manage them in every stage from engineering to manufacturing.

Furthermore, to allow customers feel driving pleasure through its products, Mazda identifies the functions and performance that embody “driving pleasure” for each stage from before getting in the car to after starting driving, so as to enhance consistency in establishing quality.

Consistent Process Assurance based on Major Characteristics

1. Establishing consistent quality, from planning to production

To satisfy the diverse needs of customers and offer greater trust, joy and excitement, Mazda is engaged in establishing a consistent quality level to be assured at all stages from planning/development to the delivery of products to customers.

Monotsukuri Innovation
Looking five to 10 years into the future, Mazda has implemented Monotsukuri Innovation for efficiently developing and manufacturing products. Shared development methods and manufacturing processes are made possible by using bundled product planning for models to be introduced in the future, spanning market segments and model classes.

Optimized structures for each function are shared across all car lines and laterally spread to each car line based on bundled product planning. A flexible production system is used to produce products engineered based on a common architecture concept in a highly efficient and flexible manner. Mazda is aiming to raise operational efficiency by building a flexible production process that can handle changes in volumes and can quickly introduce new models with a minimum of investment.

Through Monotsukuri Innovation, the Company’s products since the CX-5, launched in 2012, and Skyactiv Technology have achieved the efficiency improvement in terms of both product development and manufacturing facility investment as well as significant improvements in vehicle costs.

Through design based on common architecture under Monotsukuri Innovation, Mazda is able to promptly apply the latest technologies and designs to all of its products. In new-generation technology development, the Company is working to enhance the efficiency of development processes through bundled planning and computer modeling-based development.

*1 M-QMS: Stands for Mazda Quality Management System
*2 ISO: Stands for International Organization for Standardization. ISO 9001 is a set of international standards for quality management and assurance.
Model-Based Development (MBD)

Cars are being called on to provide increasingly advanced and diverse functions, while vehicle architecture and control systems are becoming more and more complex. Model-based development, which uses computers to efficiently replicate development processes, is essential to keep developing complex systems quickly and with limited resources. Model-based development involves creating computer models of the vehicle, control systems, drivers, passengers, driving environments and other development subjects, and conducting development via thorough computer simulation. It is an efficient method of optimization. By carrying out model-based powertrain and vehicle development through simulations from design to vehicle evaluation, Mazda strives to reduce the number of prototype parts and actual unit verification, in order to develop complex, highly sophisticated technologies and products with minimum resources while also ensuring quality.

Mazda believes that to further promote model-based development, universities working on cutting-edge technologies, automobile manufacturers and suppliers that cooperate in manufacturing must concretize the SURIAWASE 2.0 concept, which seeks to enhance development efficiency by using virtual models across the engineering chain. In July 2021, ten companies became operating members, and the “Japan Automotive Model-Based Engineering center (JAMBE)” was established to spread MBD technology widely to the automobile industry nationwide. Mazda is also participating as one of the operating member companies, and will contribute to improve the international competitiveness of the Japanese automobile industry by realizing the advanced matching development “SURIAWASE 2.0” using models. (P93)

Model-Based Development

A technique to develop outstanding products by modeling (quantifying) and connecting all four elements of (1) the car, (2) control systems, (3) the driver & passengers, and (4) the environment without using an actual vehicle.
What is advanced matching development SURIAWASE 2.0?
Created based on the SURIAWASE 2.0 concept presented in the materials prepared by the Ministry of Economy, Trade and Industry of Japan in 2017

SURIAWASE 2.0 is an initiative to enable academia and businesses (parts manufacturers and OEMs of all sizes) to share digital models across the board, linking academic research with development of parts, systems, and vehicles, thereby allowing both sides to coordinate and make adjustments (Suriawase in Japanese) digitally from the initial stages of development, without using physical machines. This approach makes it possible to create the most-advanced development community in the mobility sector, able to carry optimal and high-grade monotsukuri efficiently and without rework.

Goal: Concretize Suriawase 2.0

Achieve the most efficient development processes in the world and create new value by innovating the research, development and production processes

*1 Model Based Research: An approach that applies model-based concepts to research
Global Quality Assurance
To ensure the same quality on a global scale, Mazda has adopted the “global common” concept, under which overseas production sites establish the same quality by employing the same indicators, the same operations, and the same structures as those of the Mazda Head Office.

With the aim of achieving and maintaining the same quality into the future, the roles and responsibilities of the Mazda Head Office and overseas production sites have been clarified for management. As part of its efforts to secure the same quality on a global basis, Mazda works to establish common indicators of quality achievements and processes (standards and procedures) to be shared when conducting quality control of purchased parts or quality evaluation of finished vehicles. At the same time, initiatives are under way to develop human resources who can properly operate these processes. As part of its global quality assurance efforts, in cooperation with Mazda North American Operations, Mazda has developed a quality assurance system for a new joint-venture plant in Alabama, the United States. Under this system, Mazda commenced mass production of a new model in 2022.

Quality Assurance after Shipment
To ensure that the high quality at factory shipment is maintained until delivery to customers around the world, Mazda has introduced the same quality evaluation indicators to be applied, from production plants to distributors and dealers, with the aim of delivering products maintaining high quality to customers around the world under a consistent evaluation system.

2. Early detection and early solution of market problems
Mazda strives to offer an enriched car ownership experience, in which customers can feel satisfied with the car and realize the value of the product. While respecting each vehicle as a certain customer’s “one-and-only,” the Company endeavors to ensure stable and speedy quality improvement and enhance the quality of present and future products.

Comprehensive and Speedy Quality Improvement
To enable early detection and early solution of market problems, Mazda has established a system for unified management of all items of quality information. Such information is gathered from distributors and dealerships in Japan and overseas and by employing the results of surveys by external institutions and conducting the Company’s own market research. Under the system, the collected information is shared company-wide in real time. By using the system and closely monitoring daily progress, Mazda investigates quality related incidents and their causes, determines and implements improvement measures, and confirms the results. In this manner, Mazda works to achieve comprehensive and speedy improvement.

Quality improvement system
The Company also promotes quality improvement, capitalizing on the vehicle information collected through the utilization of connectivity technologies, in addition to conventional initiatives based on customer input.

<Examples of Surveys/Analyses>
- Gathering customer voices through Mazda-unique market survey
- Market surveys conducted by third parties
- Analysis of customer voices on social media
- Analysis of vehicle information obtained through connected technologies

Corporate Activities with Highest Priority on Customer Safety and Comfort
Mazda prioritizes safety and comfort of vehicles above all. Under a strict quality assurance system, Mazda conducts inspections on conformity with laws and regulations of each country and on functions to be used by customers, with a view to manufacturing vehicles that customers feel safe using.

This quality assurance system is maintained and managed by the development, production and quality divisions auditing each other from independent standpoints.

Recall Procedures (Overview)*1
- Registration with authorities in each jurisdiction, according to the laws and regulations of each country and region
- Disclosure to customers via direct mail, telephone, and other methods, and explanations at dealerships
- Disclosure of information on recalls on the Mazda Official Website

Number of recalls in FY March 2022 (in Japan) (P123)

*1 Recall procedures may vary among countries/regions.
3. Building Special Bonds with Customers
—Cultivating Human Resources Capable of Thinking and Acting for the Happiness of Customers

To encourage every employee to think about what they should do to please customers and to act accordingly, Mazda places emphasis on cultivating a customer-oriented corporate culture/mind. Specifically, the entire Mazda Group is committed to promoting quality awareness-raising activities, quality control education, and QC (Quality Control) circle activities.

Under the impact of the COVID-19 pandemic, since FY March 2021, Mazda has continued these activities by shifting to an online format through active introduction of e-learning and video streaming.

<Major Activities>
Quality Awareness-Raising Activities
Mazda holds quality meetings on a regular basis. At these meetings, top management communicate their commitment to compliance and quality in their own words to all employees. This provides opportunities for individual employees to reflect on and think about their work, thereby enhancing their compliance and quality awareness.

Sharing Past Cases
Mazda has undertaken an initiative to share lessons learned from past cases through exhibits of actual defective products and videos. This program is intended to encourage employees to think about past issues as issues concerning themselves and to improve their attitudes and behavior. Since its launch in FY March 2019, a total of 12,000 employees have experienced this initiative.

Employees share past cases

Quality Control Education
For the purpose of developing human resources capable of proactively finding/solving problems from a customer viewpoint and working for continuous improvement, quality control education is provided for employees. Quality education courses taught by internal instructors are offered, and employees take appropriate courses when their job type or management level changes.

QC (Quality Control) Circle Activities
Mazda promotes QC circle activities to encourage members of each workplace to find and solve problems by themselves. QC circle activities, which have been implemented for over 60 years as key activities for the company, have evolved into global activities, being conducted not only inside Mazda but also at its suppliers and dealerships. The All Mazda QC Circle Competition for “Co-Creation with Others” is held every year at the Mazda Head Office is now participated by QC circles of overseas sites, such as those in China, Thailand, and Mexico.

Training Program to Deepen Employees’ Understanding of the Mazda Brand
To enable Mazda employees to explain Mazda’s products and communicate the concept of Mazda’s monotsukuri, or product development and manufacturing, with their own words to Mazda’s stakeholders, Mazda offers a training program for employees, designed to help them deepen, through test rides in the latest models, their understanding of not only each product’s characteristics but also the spirit and philosophy common in all Mazda products.

4. Results of Quality Improvement Initiatives

Mazda’s initiatives to improve quality have been highly praised worldwide.

EXPLORNG PARTNERSHIPS FOR "CO-CREATION WITH OTHERS"

To ensure that Mazda will continue to thrive and grow, we must cherish and cocreate Mazda’s uniqueness together with everyone involved with it. While enhancing alliances with existing partners, Mazda will continue to explore new partnerships—even outside the auto industry.

Open innovation

Mazda has promoted collaboration with companies, universities and government authorities, aiming to efficiently resolve business issues by obtaining new knowledge from outside the Company and to achieve the sustainable growth of society and businesses (open innovation).

The business environment in which companies operate is becoming increasingly competitive due to stricter environmental and safety regulations, new competitors from other industries, and diversification of the mobility business. Through open innovation, the Company will achieve the growth of the Mazda Group and contribute to society, thereby fulfilling the Corporate Vision.

(1) Inter-company collaboration

Mazda has been promoting inter-company collaboration with other automakers and suppliers, etc. to enhance their manufacturing and engineering capabilities and create synergies.

Collaboration with partners who work with Mazda

While working hard together with its partners to realize our shared dreams, the Company wants to enable them to feel proud of their connection with Mazda, and emotionally attached to the brand. This will turn Mazda into the brand it wants to be, connected to all stakeholders, including customers, by the strongest of bonds. On the basis of mutual trust with Toyota Motor Corporation and various other companies, the Company plans to promote active collaboration.

Implementation of the Autonomy Development Program That Supports the Autonomous Growth of Local Suppliers

Mazda has conducted the Autonomy Development program aimed at promoting the autonomous growth of local suppliers since 2019. This program was created for local suppliers based on the approach adopted in the Global Manufacturing Network (GMN), which has been promoted since 2013 to enable each production site in Japan and overseas to autonomously carry out high-quality and highly efficient production activities that improve the Mazda brand value and to learn from each other at the same time. The program is designed to enhance human resources development as the key to the autonomous growth of local suppliers, for which the Jiba Achieve Best Cost (J-ABC) program as a foregoer was not clearly intended. In the Autonomy Development program, promoters are assigned to play a leading role in promoting understanding of the approach in the MPS through top management training and promoter training. Local suppliers are encouraged to create a system to develop human resources through practical project work toward the company-wide operation of the system. Launched at three model suppliers in August 2019, the program is being conducted at a total of 19 suppliers (as of September 2022), with seven Mazda Production System (MPS) Master Trainers appointed from five of those suppliers to lead other supervisors toward full in-house implementation of the program.

Vision to promote MPS

Establish a high-quality and highly efficient production footprint to improve the Mazda brand value through human resources development in cooperation with suppliers on a global basis.

MPS flow chart

- Cost reduction
- Quality assurance
- Pursuing ultimate ways of streamlining the flow of goods, information, money, and work
  - Just In Time
  - Synchronized production

Implementation of the Autonomy Development Program at Overseas Production Sites and Their Local Suppliers

In the course of transition to the Autonomy Development program in Japan, the Company has adopted the Global Manufacturing Network (GMN) at overseas production sites toward the autonomous growth of local suppliers. The four overseas production sites including AutoAlliance (Thailand) Co., Ltd. (AAT), Changan Mazda Automobile Co., Ltd. (CMA), Changan Mazda Engine Co., Ltd. (CME), and Mazda de Mexico Vehicle Operation (MMVO), engage in activities with 14 local suppliers in total as of September 2022. A total of 19 members from 12 suppliers have been appointed as MPS Master Trainers.
Exploring Partnerships for “Co-Creation with Others”

(2) Industry-academia-government collaboration

Mazda, in establishing the Industry-Academia-Government Collaboration Secretariat, has promoted collaboration with local companies, universities and government authorities. Through collaboration among government, academia and industry, the Company has contributed to the local community in terms of developing new creative technologies and nurturing human resources capable of bringing about innovation.

Hiroshima Council of Automotive Industry-Academia-Government Collaboration (Hirojiren)*1

As a company which has its research & development and production facilities mainly in Hiroshima Prefecture, Mazda believes that cooperation with local business and industry is very important. Under this belief, Mazda is collaborating with the Chugoku Bureau of Economy, Trade and Industry, Hiroshima Prefecture, Hiroshima City, Hiroshima Industrial Promotion Organization, and Hiroshima University to support local automobile-related companies and promote innovation and the vitalization of the region. Toward achieving the 2030 Industry-Academia-Government Collaboration Vision established in 2015, various activities have been conducted, such as creating new frameworks to support local businesses, exploring new partnerships for “Co-Creation with Others”.

| Exploring Partnerships for “Co-Creation with Others” | Mazda is collaborating with the Chugoku Bureau of Economy, Trade and Industry, Hiroshima Prefecture, Hiroshima City, Hiroshima Industrial Promotion Organization, and Hiroshima University to support local automobile-related companies and promote innovation and the vitalization of the region.

The 2030 Industry-Academia-Government Collaboration Vision Upheld by Hirojiren

- Transform Hiroshima into a hub that attracts people seeking innovative automotive technologies and dynamic car culture, and a place that continually produces technologies that amaze the world.
- The industry, government and education sectors work together to nurture human resources capable of innovation across all generations, and enliven the region through Monozukuri (product development and manufacturing) activities.

Mazda will continue to accelerate activities with a view to the social implementation of development technologies in the future.

**Measures and activities**

- Opened next-generation automotive technology joint-research course (in April 2015)
  - Internal combustion engine laboratory (opened in April 2015)
  - Aerodynamics laboratory (opened in July 2016)
  - Advanced materials laboratory (opened in October 2016)
  - Algae energy creation laboratory (opened in April 2017)
  - Model based development laboratory (opened in April 2019)
  
- Comprehensive collaboration agreement (since February 2011) Proactively conducted joint research, from exploring research themes to finding solutions. Also cooperated in examining the ideal form of internship, and decided the method of accepting interns and setting themes for human resources development. Regional empowerment and open innovation Participated in the Co-Creation Consortiums in the Material Model Based Research Division and the Data-Driven Smart System Division of the Digital Monotsukuri (Manufacturing) Education Research Center (P.99). In FY 2023, held a co-creation seminar that conducted formative activities on the theme “Emotional Flames” (Miyajima flame holder). |

- Opened the Mazda Next-generation Energy Storage Joint Research Department (in August 2017). Delivered a special lecture on introduction to automotive science in the Department of Automotive Science of the Graduate School of Integrated Frontier Sciences (in April 2021). |

- Research Collaboration Promotion Committee Held meetings to discuss the progress of joint research projects and specific measures to strengthen cooperation. |

- Set up an experimental station dedicated to research into applications of advanced analytical techniques. Mazda’s participation in Tokyo Tech’s Super Smart Society Promotion Consortium (from October 2018) Participated in matching workshops for exchange of information about research seeds and companies’ needs, held twice a year, to promote the matching of joint research projects Collected and disseminated the latest information on relevant technologies through free symposiums and seminars Conducted joint research utilizing big data, machine learning, etc. (from March 2021) Introduces and arranged internships Membership system (from February 2020) Assisted in materializing joint research projects, held free seminars, etc. Comprehensive Security Protection Agreement (from October 2016) Simplified the procedure for security protection during technical consultation Lecture on automotive technology Structured and implemented the lecture based on the concept of Mazda’s Monotsukuri...
(4) Industry-government collaboration

Mazda efficiently promotes cutting-edge joint research and shares needs and seeds with suppliers through collaboration with government authorities.

Business Matching Meetings for Suppliers and Universities (Collaboration with Administrative Organs)

Mazda organizes business-matching meetings in collaboration with the local administrative organs, in which information on technological needs and seeds was exchanged between suppliers, universities and public research institutes.

FY March 2022 Activity

Activity Organized an event to share information about Mazda’s needs with the Kyushu Automotive and Motorcycle Industry Promotion Council and held the online event “Kyushu New Technology and New Methodology Exhibition in Mazda,” with the participation of companies in the Kyushu Region.

Promotion of Model Distribution in the Automotive Industry

Mazda has participated in the Study Group for Ideal Approaches to Model Utilization in the Automobile Industry organized by the Ministry of Economy, Trade and Industry since its launch in November 2015. The Company works on initiatives with other automakers and parts manufacturers to spread Model Based Development (MBD), a development technique to achieve the advanced development and performance assessment process for automobiles through virtual simulation.

In April 2018, the Company agreed on the Enrichment of SURIAWASE 2.0*1 for the Automobile Industry (an industry-academia-government joint strategy project policy), and announced that the Company would continue with the initiatives to enrich MBD and harmonization areas, etc. In addition, Mazda formulated the guidelines for smoothly promoting model distribution between companies, based on the results of activities implemented by the study group thus far. In December 2018, the study group and ProSTEP iVip,*2 an international standardization organization, jointly announced these guidelines to the world, as international rules originating from Japan. This study group concluded its activities in March 2021, and in order to carry on the results of the study, ten companies became operating members, and the “Japan Automotive Model-Based Engineering center (JAMBE)” was established in September 2021 to spread MBD technology widely to the automobile industry nationwide. Mazda is also participating as one of the operating member companies, and it takes full advantage of its knowledge of virtual simulation and unique MBD that have been refined through Mazda Digital Innovation (MDI) to contribute to activities for increasing the global competitiveness of the Japanese automotive industry.

Basic and Applied Research on Technologies for Internal Combustion Engines and Cleaner Exhaust Emissions

Mazda participates in the Research Association of Automobile Internal Combustion Engines (AICE*3), a new joint research organization in the Japanese automobile industry. AICE was established on April 1, 2014, with the support of the Ministry of Economy, Trade and Industry to enable automobile manufacturers to conduct basic and applied studies jointly with universities and research institutions on themes common to automobile manufacturers, and to use the research results to accelerate their in-house development activities. AICE is currently conducting basic research under a research scenario aimed at achieving carbon neutrality by 2050. Taking advantage of its participation in AICE, Mazda is promoting its development of technologies for internal combustion engines and cleaner exhaust gases, with a view to achieving improved fuel economy and reduced exhaust emissions. Beginning in April 2019, the Company has expanded the scope of its development efforts to include mechanical resistance reduction and heat management technologies.

*1 SURIAWASE 2.0 is an initiative to enhance the harmonization of development processes by taking advantage of an MBD process that uses virtual simulations instead of physical machines across entire supply chains in Japan. A Study Group for Ideal Approaches to Model Utilization in the Automobile Industry was organized in November 2015 by the Ministry of Economy, Trade and Industry, to further enhance the international competitiveness of the automotive industry.

*2 An international standardization organization based in Germany. Its membership comprises 185 companies, primarily automakers in Europe, the United States and Japan, as well as airlines and software companies. ProSTEP iVip works to develop and promote international rules regarding CAD and MBD.

*3 Research Association of Automobile Internal Combustion Engines, participated in by nine Japanese auto manufacturers and two organizations (as of April 2021).
